

CATAN

ENERGY CRISIS

EXPANSION FOR NEW ENERGIES

RULEBOOK

During an energy shortage, energy production must be increased to compensate for the increased demand. The global footprint is an indicator of what type of energy is being produced on Catan. A low global footprint indicates renewable energy production has been a viable investment. Players who have invested heavily in this area benefit from a need for increased production. A high global footprint indicates that fossil fuels still dominate investment. Players who have invested heavily in that industry now benefit from the sudden increase in demand.

CONTENTS & SETUP

1 Energy Shortage Track

- Place the energy shortage track next to the climate conference track.

2 Energy Shortage Discs

- Put the 2 energy shortage discs in the bag.

RULES

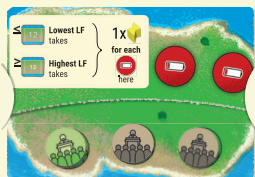

When an energy shortage disc is drawn, place it on the energy shortage track. Then immediately draw another event disc.

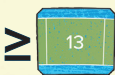

- *The energy shortage disc does not count toward the number of discs you pull in a turn.*
- *When the energy shortage track is filled, no event is triggered.*

Triggering energy shortage effects

The energy shortage effects only occur when the climate conference event is triggered. First, resolve the climate conference. Then resolve the energy shortage as follows:

If the global footprint level is 12 or lower (9 or lower for 3 players): The player(s) with the lowest LF takes 1 energy token for each energy shortage disc on the track.

If the global footprint level is 13 or higher (10 or higher for 3 players): The player(s) with the highest LF takes 1 energy token for each energy shortage disc on the track.

Finally, put all the energy shortage discs back into the bag and continue as usual.
